

KOBLOCH
METAL AT ITS BEST

Commercial Mailbox Solutions

Multi-unit Mailboxes

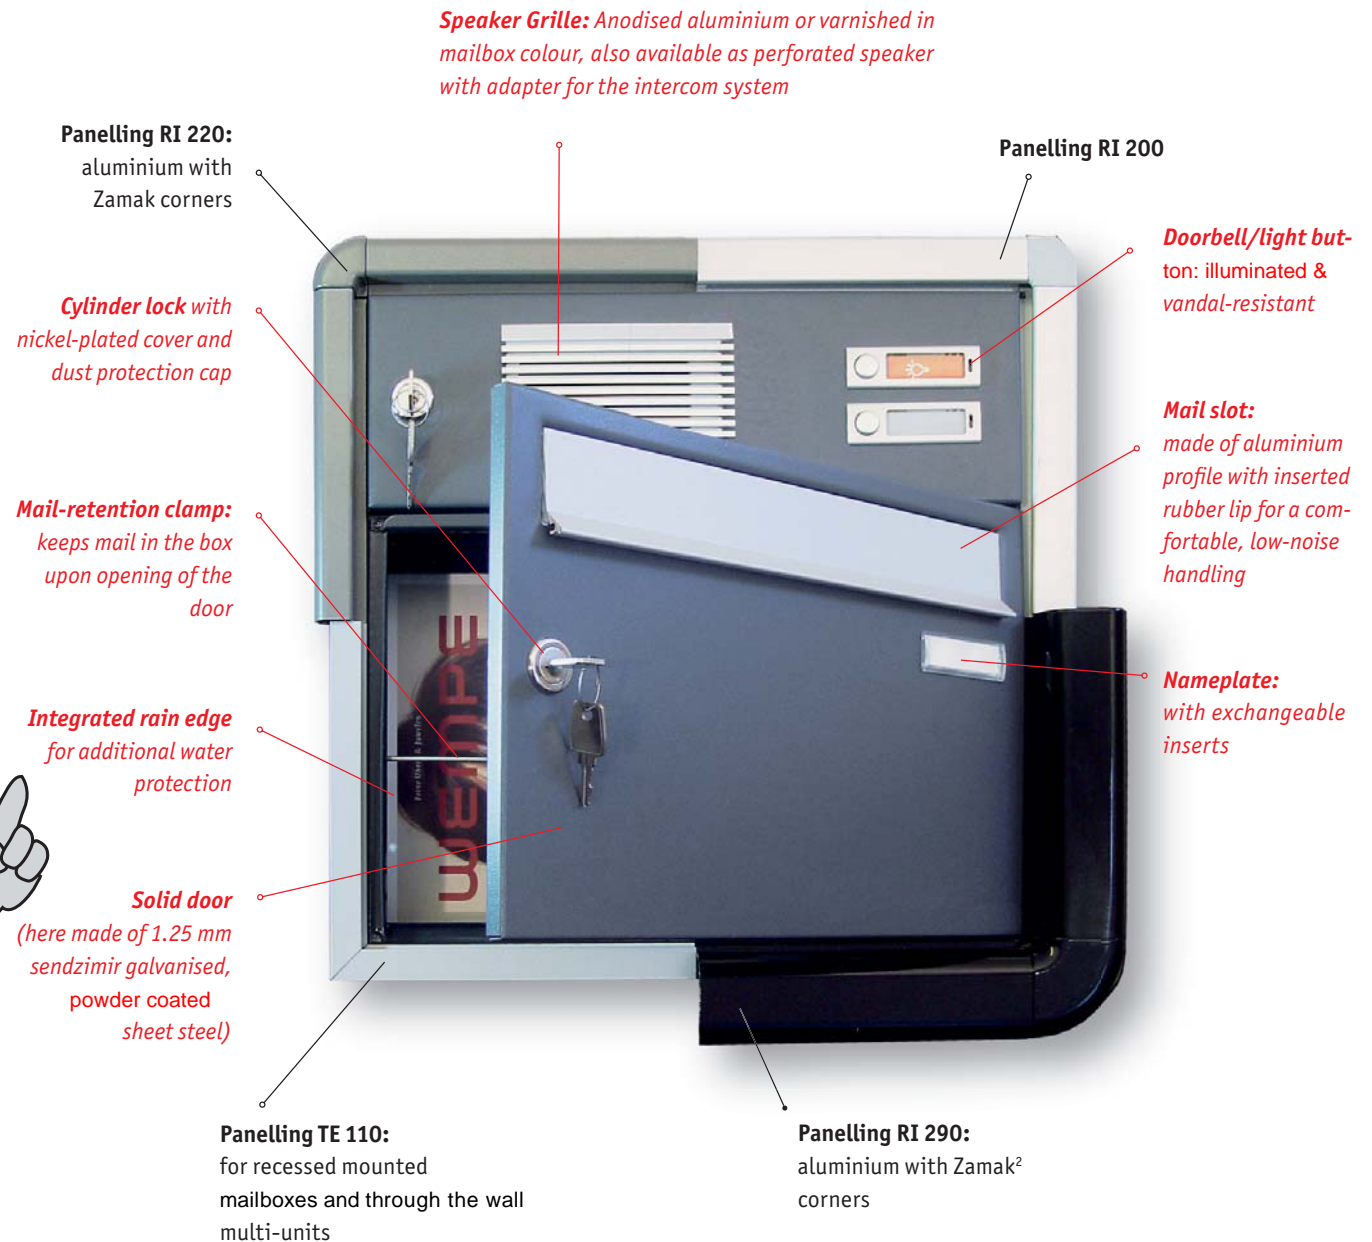

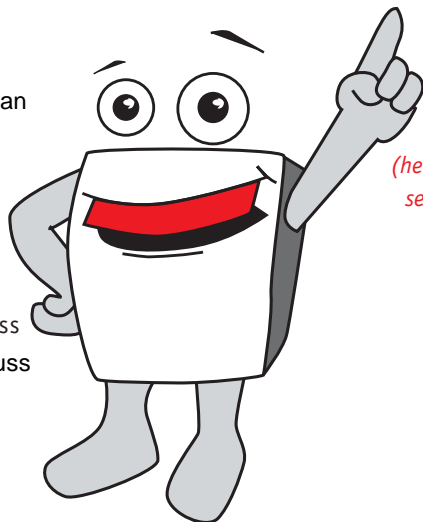

Experience a quality that will convince you.

Multi-unit mailboxes have to fulfill several expectations. First and foremost is function: the delivered mail has to be kept secure and dry. Larger parcels should fit well. This is regulated by the EN 13724. If there is less space, smaller mailboxes must be used. But, regardless of the size, quality and security come first. Other important selection criteria are stability, durability and longevity. Because mailboxes are installed in the entrance area, the design must be convincing. And last but not least, the boxes should provide value for money.

KOBLOCH stands for multi-unit mailboxes which consistently exceed these requirements. **In our complete product line you will find practically every mailbox imaginable – for the family house as well as for the Office Block, from the solid model for the factory to the precious wood-panelled designer mailbox for the sophisticated owner.** All of our mailboxes have high quality and meticulous processing in common. Built solidly and designed to be longlasting through a versatile modular construction system to accommodate all construction conditions.

The following pages will provide information to help achieve the best solution for your mailbox requirements

Our range of standard RAL colours can be found on page 6
Additional colours are available from our stock of more than 200 different RAL- and special shades. Processing is also possible for materials like brass and PVD-coated stainless steel and we will be pleased to discuss any individual requirements

There are many **free-standing multi-units** on the market. It's just that ours are also long-standing.

Our free-standing multi-units are flexible, practical and adaptable to most situations. At **KOBLOCH** we do it even better.

Our products offer both durability and value for money backed up with a 5 year guarantee against corrosion.

Our catalogue provides a comprehensive range of individual and multi-unit boxes and a complete list of accessories..

Surface mounted multi-unit
with vertical mailboxes,
panelling RI 220 V and
integrated message box*

Here's a tip:
Please note that surface mounted multi-units with horizontal mailboxes can be up to 380 mm deep and because of this they could constrict driveways and footpaths, especially in stairways. In this case we recommend the use of vertical mailboxes.

**Recessed Mounted:
One can sink to this level.**

Stylish and unobtrusive, our mailboxes fit into most architectural surroundings. With a wide range of designs available we sure to have the right combination for you. Our choice of plaster - cover frames will ensure that your mailbox unit will always have a professional finish

To achieve this you don't have to make any concessions with the multi-unit's equipment or functionality. from an almost limitless number of possibilities we can supply the right solution for you . We are happy to help!

Only the mail is allowed to go through the fence.

Whenever there's a fence on hand, it's worth thinking about integrating a multi-unit mailbox into it. This smart alternative offers the following advantages.

First of all, construction on your house or property is not required. Secondly, fence mailboxes offer you maximum security concerning the mail delivery reducing the need for anyone to come onto your property

installation

Even with the smallest door, you've got mail.

Rear retrieval mailbox units provide a solution for secure mail delivery to commercial and residential premises.

"Through the wall" mailbox units offer the perfect solution for installations that require the mail to be delivered in the traditional way with internal individual mail collection at multi-occupancy premises. These units minimise the risk of vandalism and incorporate a noise damper within the letterflap. Our specialised customer service team are always on hand to help.

A breakthrough for the mail: Thru-wall Multi-unit Mailboxes.

Secure mail delivery through masonry or brickwork is easily facilitated using these mailbox units. To achieve this we are able to provide a multi-unit mailbox to be integrated into the masonry or masonry columns.

Together with the wide range of plaster cover frames these boxes offer a truly professional finish.

Show Your True Colours!

Our colours and surfaces comply with the highest standards and requirements. Whether anodised aluminium, RAL powder coated or rust-free stainless steel, we stand behind our quality. You haven't found the right colour tint in our standard offer? No problem: Simply select the right colour palette out of the RAL colour tray and order it as a custom colour. We'd also be happy to advise you with your selection. The shine of the colours remain intact for a long time thanks to the high-quality weather and UV-resistant powder coating used. For all RAL colours out of our standard offer, we calculate a 20 % additional cost for all powder coated parts. The pictured RAL and anodised colour tints are only approximations. For the exact colour tint, the RAL colour cards and anodised pattern are binding.

Standard RAL Colour Tints

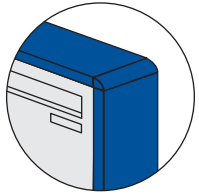

Standard anodised colour tints for aluminium fronts

Here's a tip!

As a result of the most modern, environmentally friendly varnishing facilities, we can offer you more colours in our standard range - without a price increase.

- replacement part delivery for all products
- supplementary key for all mailbox locks
- manufacture of metal products of all types according to your specifications
- installation of complete multi-units on site

Product Care Tips

Please regularly clean all products, especially stainless steel products exposed to dirt or aggressive environmental influences (i.e. saline air). Only in this way is a long lifetime guaranteed. The powder coated surfaces as well as the stainless steel and anodised aluminium surfaces should be cleaned with warm water and washing-up liquid. Stainless steel components can also be treated with customary stainless steel cleaning agent. Please don't use any mechanically acting or oxide dissolving cleaning products. These corrode the anodised coating and destroy the surfaces. Door and lock hinges should be treated with a special cleaning agent, at least twice a year.

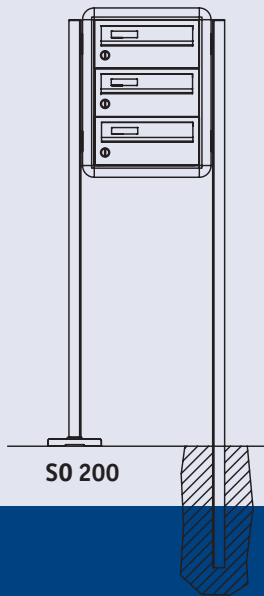

Guarantee

We issue a five year General Product Guarantee on all of our products.

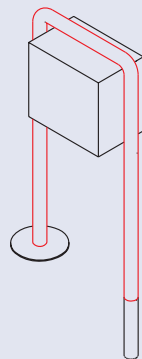

Custom Production

We also manufacture mailboxes, doorbell plates, house numbers, among other products, according to your specifications. Simply let us know what you'd like.
