glasnost is the first mailbox worldwide with a translucent front.

the name "glasnost" is the concept. people deciding for a glasnost-mailbox are open-minded, they don't have to hide anything!

Meanwhile glasnost has become a real mailbox-classic. Designing has followed the bauhaus-philosophy, it is very reduced and nevertheless distinctive. The design award FORM 2001 confirms the high demand on design.

The mailbox glasnost is qualitatively a very high-class product. You can hear the quality by the sound of the opening flap. A weight of 9 kg shows the thickness of the stainless steel.

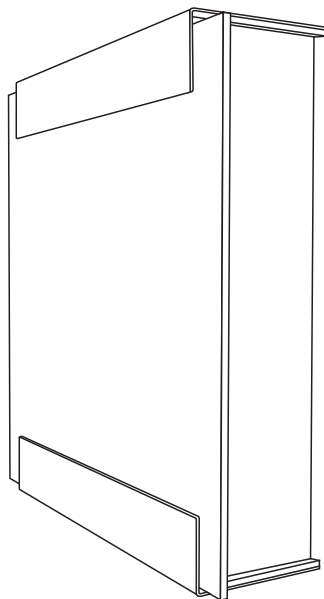

The glass front is made of satined toughened safety glass. The thickness of 6 mm and the polished edges give the mailbox a high-class appearance.

The funnel-shaped opening under the opening flap allows an easy dropping of the mail. The opening corresponds to the post-standards.

The high-class stainless steel safety lock has been placed invisible under the opening flap. The safety lock is protected against rain and freezing. Two keys are included in delivery.

Installation material consisting of rosettes, anchors and stainless steel screws is included.

We offer also adequate glasnost accessories like newspaper boxes or stands.

width 420 mm
height 435 mm
depht 125 mm
letter slot 320 x 32 mm
weight approx 9,0 kg
